Summary

Full-stack engineer with 2+ years at Oracle building enterprise procurement software for Fortune 500 clients, founder of AniverseHD (20,000+ daily visitors) and solo builder of DevLens, an open-source AI codebase visualizer for developers and agents. Hands-on across React/Next.js, Node.js, Python, SQL tuning, vector search & RAG, Supabase, and LLM/AI-agent tooling.

Experience

Oracle (Procurement Cloud)

Jul 2024 – Present

Application Software Engineer

- Owned end-to-end delivery for Oracle Fusion SCM Self-Service Procurement across UI (VBCS), REST API, and database layers for Fortune 500 clients.
- Acted as technical point of contact for enterprise escalations, diagnosing and resolving **120+** production issues across UI, API, workflow, and database layers.
- Built an internal Fusion debugging tool adopted by multiple Oracle teams, turning tribal-knowledge debugging into a repeatable workflow — **~50%** better triage, **20%** faster resolution.
- Optimized SQL queries cutting page load times from **70+ seconds to under 1 second** on high-traffic procurement views.
- Re-engineered the Position Synchronization job — **~70%** fewer data updates and **~40%** faster execution.
- Led the Redwood (VBCS) UI modernization for Procurement Cloud, profiling bottlenecks and shipping responsive components.

Projects

DevLens — Intelligent Codebase Visualizer

Jan 2026 – Present

Open source • React, TypeScript, Node.js, LLM tooling

[devlensOSS](#)

- Intelligent codebase visualizer for developers and AI agents — parses JavaScript, TypeScript, Python, Java, Go, and Rust into a queryable dependency graph for PR review, onboarding, and architecture analysis.
- Designed and shipped the full stack solo: multi-language parsing engine with **500+ tests**, graph query layer, React frontend, and CLI.
- Built LLM-powered features and agent-facing tooling on the code graph — RAG-based Q&A, embeddings, and automated review workflows.

AniverseHD — Anime Streaming Platform

Aug 2023 – Jul 2025

Next.js, Qdrant, Redis, Firebase, Cloudflare Workers/D1, Python

[GitHub](#)

- Founded and led the product (idea, architecture, and **~80%** of the build); owned streaming infrastructure end-to-end.
- Scaled to **20,000+ daily visitors** and **6,000+ signed-in users** (16-minute average sessions, <40% bounce rate); managed production monitoring and performance tuning at peak load.
- Maintained a **27,000+** title catalog via automated Python/Shell ingestion pipelines, Firebase Auth, and Cloudflare D1/Workers.
- Built the Qdrant vector-search recommendation engine (700-dimensional embeddings) for personalized suggestions.
- Archived at peak in 2025 to focus on DevLens.

Skills

Languages: JavaScript, TypeScript, Python, SQL, C++, HTML, CSS

Frontend: React.js, Next.js, Tailwind CSS, Zustand, VBCS (Oracle Redwood)

Backend & Cloud: Node.js, Cloudflare Workers/D1, Firebase, Supabase, Vercel, Redis, AWS, Docker, Git, CI/CD

AI & Data: Qdrant (vector search), RAG pipelines, embeddings, MCP & AI-agent tooling

Education

Indian Institute of Information Technology (IIIT), Surat

Surat, India | Aug 2020 – May 2024

B.Tech in Electronics and Communication Engineering — CGPA: 8.70

Open Source

- Maintainer of **devlensio/devlensOSS** — open-source AI codebase visualizer: multi-language parsing, graph engine, CLI, React app.
- Built the AniverseHD Discord bot for the community — anime search, daily news RSS, interactive commands.
